

## La Canada High School

La Canada High School is a combined Junior-Senior high school in Flintridge, California. Recently, it came to the attention of administrators at the school that they were experiencing a large amount of water accumulation in the parking lot after rain storms. Rather than expecting faculty, students, and parents to trudge through oversized puddles the school administrators elected to have a new drain system installed on the lot. Despite initially looking into competing products, contractors on the project were convinced by their distributors that NDS Filcoten was a top-quality product that could be delivered quickly.

For public outdoor spaces with frequent vehicle traffic, NDS Filcoten Trench Drains are the smart choice. Filcoten channels are composed of high performance concrete that are engineered inside and out to provide the most effective water flow characteristics as well as stable cohesion with surrounding concrete. NDS also offers a variety of grate options for Filcoten that range from understated heel proof slot-tops to heavy-duty ductile iron grates capable of supporting large vehicles and trucks. Contractors agreed that this was the right solution for the project and installed 400 ft of Filcoten-200 8 Inch Channels with the ductile bar grate for added vehicle support.
