Fire Lane

Contractor

Cherokee Builders

Installation Date

December 2005

Project Information

During the installation: Tufftrack Grassroad Paver panels were connected, filled, and leveled in the designated fire lane areas.

Union High School, Tulsa, OK

Project Information

When the Tulsa Independent School District prepared to open a new school at 6636 South Mingo Rd, the Dewberry Design Group was faced with the decision of how to provide emergency vehicle access roads leading up to the building and athletic facilities.

Due to its high compressive strength of 98,700 psf and the flexibility to either sod or seed the area immediately following the installation, Tufftrack Grassroad Paver was selected.

Independent contractors Cherokee Builders had never before installed a grass paver project, but after installing 8000 square feet of Tufftrack at Union High School they reported that it was straightforward and simple to install. Cherokee Builders plans to utilize this product on future installations.

Finished Installation

Sod was laid down on the Tufftrack Grassroad Paver to complete the installation. The image above shows the finished fire land on the far side of the school.
