installed under grass can
support up to 98,000
lbs/square foot**

Tufftrack®

GRASS PAVER

RESIDENTIAL APPLICATIONS

Prevent driveway run-off damage...

***Install NDS Grass Pavers as driveway edging,
or use in overflow parking applications!***

Installing a new or replacement driveway? Consider upgrading the adjacent lawn area by installing time-proven, sturdy NDS Tufftrack Grass Pavers, and eliminate the potential for drive-off damage by car and truck wheels on wet, saturated grass.

It's a sad fact of life: Every spring homeowners find ruts in their lawn adjacent to the drive caused by drivers missing the edge of the driveway — often caused by bad weather or darkness. Installation of Tufftrack for use as Driveway Edging virtually eliminates the problem.

Because Tufftrack can support over 98,000 lbs/square foot, when installed on a stone sub-base, you can drive an 18-wheeler over it.

It can also be used in lighter applications on native soil, using a minimum 4" deep tilled and compacted soil base. This can be achieved due

to Tufftrack's unique web base that supports and strengthens the series of cells that make up each 24" x 24" interlocking paver.

These pavers provide solid support for vehicular traffic — whether for use in simple drive-offs, over-flow parking, or other residential applications such as supporting recreational vehicle parking, etc.

Tufftrack Grass Pavers allow for healthy turf growth, even in areas of high traffic applications. Because of its web-base design, even when used with a stone base for heavy-duty applications, Tufftrack allows for a deeper, more supportive root zone to better nourish natural grass.
