

Offices at 988 Howard Ave

In Burlingame, California a new office complex was being constructed at 988 Howard Ave. Contractors on the project were tasked with finding a drain system that could meet the basic needs of their outdoor walkway and driveway. As the contractors didn't anticipate any abnormal drainage requirements and only a light amount of traffic, they weren't looking for a heavy-duty application.

Distributors associated with the project already preferred NDS Products, so the NDS Mini Channel was quickly recommended for its proven durability and modest size.

NDS[®] Mini Channel

As an alternative to concrete drain systems, the NDS Mini Channel is the perfect choice for light traffic areas with manageable sheet-flow runoff. Mini Channel Drains are excellent for applications like athletic courts, patios, and pools but offer grates that support Class B vehicle loads. The Mini Channel Drain doesn't require a concrete base and is well suited for paver applications as well.

Now the offices at 988 Howard Ave are complete and the NDS Mini-Channel is entrenched in both concrete and paver surfaces along the outside.
