

Residential Driveway in Napa

In the hills of Napa, California the property design runs the gamut from modern to rustic. One property owner from this area was looking for an alternative to concrete driveways that wouldn't clash with the design of their home and wouldn't direct water off the property. Contractors in charge of this project got in touch with NDS and a representative recommended NDS Permeable Pavers as a proven alternative to traditional hardscaping. NDS Permeable Pavers utilize hexagonal cells to create a strong, permeable surface area that uses grass or gravel to support vehicles and filter water back into the local soil.

NDS[®] EZ Roll Gravel Pavers

Ideal Applications: Golf cart paths, service roads, jogging tracks, bike paths, RV & Boat access and parking, fire lanes and emergency vehicle access roads.

For a driveway like this, EZ Roll Gravel Pavers by NDS are a reliable choice that come pre-assembled in rolls for easy installation. EZ Roll is composed of nested hexagonal cells that provide it with high compression strength and flexibility for installing in a variety of different outdoor spaces. EZ Roll is also an environmentally friendly solution that is composed of 100% recycled materials and facilitates water filtration back into the soil. EZ Roll comes in black, gray, tan, and brick red colors that work wonderfully with a number of different gravel fill aesthetics for customers who really want to go outside the bounds of a traditional driveway. These features were enough to sell the owner on EZ Roll Gravel Pavers, so NDS worked with contractors to come up with a great design plan. Now the owner has an attractive gravel driveway that keeps water on the property rather than directing it away.
