Control Zone Kits

Installation Instructions
1. This Control Zone Kit comes partially assembled with a Teflon tape connection. Rotate the PRYF to desired fit prior to installation.
2. For optimal performance position PRYF down to prevent debris from entering the line when the filter is removed for cleaning.
3. Connect the valve to the water supply line.
4. The on/off switch below the solenoid can be used for a manual bleed during installation or maintenance. Connect one solenoid wire to the controller common and the other wire to the controller power. Use water-tight connections. Unscrew EZ-Flush cap on the top of the PRYF and use the on/off trigger to flush out the assembly.

Operation/Maintenance*
1. Periodically remove the filter element.
2. If dirty, rinse the filter element in water before reinstalling.
3. In a freezing climate, water should be removed from the irrigation system before freezing occurs.
   * Frequency is dependent on water quality.

High-Performance Drip Irrigation Solutions

Dura Flo™ CV
Faster and easier to install with the longest run length in the industry – fewer valves, less work.

Smart-Loc™ Fittings
Easier and faster to install than an insert fitting.

Insert Fittings
Easy to install and compatible with 17mm tubing. No clamps required for pressures less than 50 PSI.

AccuFlow™ Emitters
The most accurate pressure compensating emitter.

HP 125 PRO Punch Tool
Make installation on large jobs easier.

Polyethylene Tubing
Tubing for any application.
